QA Internship Case Study

Prepared by: Emirhan Özger

February,2024

Istanbul

Dear C-level Managers and Team,

I would like to inform you about the manual Quality Assurance (QA) testing process I recently completed and documented in detail on the [Jira dashboard](). This process involved a detailed functionality-only review of our already released project, including findings, bugs found, areas for improvement and proposed new features.

Summary

This QA testing process included a comprehensive evaluation of the current functionality of our project. During this assessment, we focused on the project's potential to increase value for our users and partners. The tests were carefully planned and executed to provide a detailed analysis of the current state of the project.

Conclusions and Improvement Recommendations:

Focusing on functionality, the QA tests successfully identified areas for improvement in various parts of our project. The issues and bugs identified as a result of these tests were documented in detail in the Jira dashboard, improving the overall quality of the project and user experience. Specific bugs, areas requiring improvement and new feature proposals are as follows:

Issues: Details of the issues identified and the functions they affect are clearly documented in the Jira dashboard.

Improvements: Improvement opportunities that can enhance the user experience have been identified in the project. These are concentrated in areas such as changes in the user interface, optimization of the workflow and features that will enable more effective use of the system.

New Feature Suggestions: Suggestions on new features to improve user satisfaction were developed.

Next Steps:

Proceeding with the process of identifying bugs and improvement suggestions on the Jira dashboard.

Evaluation of the new feature proposal.

Implementing the improvements and new features effectively and resolving the bugs in collaboration with relevant teams and individuals.

Conclusion:

Although our project has already gained a foothold in the market, the need for continuous improvement and adaptation remains. This QA testing process provided critical information for further development of our project. Implementing the suggested improvements and new features will increase the value of our project for our users, while strengthening our position in the market.

Thank you for your input during this process and I welcome you to contact me with any questions or comments going forward.

Kind Regards,

Emirhan Özger
